Detailed Action

The following is in response to the amendment filed 7/3/00:

5 An action on the merits of claims 1-3, 5, 10-11, 13-14, 17 and 19 are contained herein below.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. § 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3, 5, 10-11,13-14, 17 and 19 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in

the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The instant specification invites the skilled artisan to experiment. The factors which must be considered in determining undue experimentation are set forth in <u>In re Wands</u> 8USPQ 2d 1400. The factors include:

- 35 1) quantity of experimentation necessary,
 - 2) the amount of guidance presented,
 - 3) the presence or absence of working examples,
 - 4) the nature of the invention,
 - 5) the state of the prior art,

- 6) the predictability of the art,
- 7) breath of the claims and the
- 8) level of skill in the art.

5

10

15

20

25

30

Quantity of experimentation necessary, Amount of guidance presented, Presence or absence of working examples

The instant claims of 1-3, 5 and 17 are drawn to a composition for enteral administration comprising at least one anti-HIV drug and at least one cortisol blocker.

As applicant is claiming a composition, there should be provided in the specification sufficient data showing how the claimed invention is made. However, applicant does not provide sufficient data wherein at least one cortisol blocker and at least one anti-HIV drug are used together in a composition.

Applicant provides working examples wherein a cortisol blocker is administered subsequent to the administration of an anti-HIV drug, however this does not constitute a composition. The table presented on p. 22 of the specification provides for mixtures of cortisol blockers separate from mixtures of anti-HIV drugs, but does not provide for a mixture or composition of an anti-HIV drug and a cortisol blocker.

The instant claims of 6-16 and 18-20 are drawn to a method of treating the side effects associated with human immunodeficiency virus in a human comprising administration of at least one anti-HIV drug and at least one cortisol blocker.

In the instant specification applicant provides data from an endurance test performed on rats and a toxicity assay as guidance for the effectiveness of the cortisol/anti-HIV composition; as

5

10

15

20

25

30

well as, a dosage table for Procaine, Zn, Ascorbic acid, AZT, ritonavir, 3TC and Epivir to support the instant claims.

Applicant states that the side effects of bone marrow suppression, nausea, myolgia, insomnia, Cushing's syndrome, anemia, disruption of fat metabolism, elevated triglycerides, elevated cholesterol, insulin tolerance, buffalo humps, protease paunches are greatly reduced in Groups 16-24.

However, there is no explanation set forth in the specification that enables a correlation of the data presented in the table to the alleviation or reduction of the targeted side effects. Applicant's statement of a reduction of the side effects does not serve as sufficient evidence or guidance. Moreover, applicant attempts to correlate murine exhaustion points in an endurance test to the alleviation of side effects such as nausea, myolgia, insomnia, Cushing's syndrome, anemia, disruption of fat metabolism, elevated triglycerides, elevated cholesterol, insulin tolerance, buffalo humps, protease paunches does not seem to be a reasonable correlation. Applicant does not provide sufficient data demonstrating actual measurements of each side effect and a corresponding reduction or alleviation.

An Inventor should be allowed to dominate future patentable inventions of others where those inventions were based in some way on his teachings, since such improvements, while unobvious from his teachings, are still within his contribution, since improvement was made possible by his work; however, he must not be permitted to achieve this dominance by claims which are insufficiently supported and, hence, not in compliance with first paragraph of 35 U.S.C. 112; that paragraph requires that scope of claims must bear a reasonable correlation to scope of enablement provided by specification to persons of ordinary skill in the

Serial No. 09/234,532

Art Unit 1623

5

10

15

20

25

30

art; in cases involving unpredictable factors, such as most chemical reactions and physiological activity, scope of enablement varies inversely with degree of unpredictability of factors involved.

In the case of the instant example, the data presented does not sufficiently provide for a reasonable correlation of enablement for the management of the targeted side effects.

Moreover, sufficient data is not presented for cortisol blockers with varying structures and effects in the body such as phosphatidylserine, HMB, DHEA, ketaconazole, etc. that would enable one of skill in the art to use these compounds for the management of side effects associated with the treatment of human immunodeficiency virus. In the absence of such data, one of skill in the art would be subject to undue experimentation in the practice of the claimed invention for the management of side effects associated with anti-HIV drug therapy.

<u>35 USC § 103</u>

The following is a quotation of 35 U.S.C. § 103 which forms the basis for all obviousness rejections set forth in this Office action:

A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5

15

20

25

30

Subject matter developed by another person, which qualifies as prior art only under subsection (f) or (g) of section 102 of this title, shall not preclude patentability under this section where the subject matter and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person.

Claims 1-3, 5, 10, 11, 13, 14, 17 and 19 are rejected under 35 U.S.C. § 103 as being unpatentable over Devita et al., AIDS,4th edition, pp. 501-504, in combination with Beale, U.S. Patent No. 5,756,469 and Lemay et al., Int. Conf. AIDS, vol.5,1989.

Claims 1-3 are drawn to a composition comprising at least two anti-HIV drugs and a cortisol blocker.

Claims 5, 10, 11, 13, 14, 17 and 19 are drawn to a method for the management of side effects associated with the administration of anti-HIV drug therapy comprising administration to a patient a therapeutically effective amount of at least one cortisol blocker.

Beale teaches the use of anti-cortisol compounds such as HMB, DHEA, Ipriflavone and phosphatidylserine in the treatment of patients with AIDS to reduce the catabolic effects associated with AIDS (col.2-col.8, line 19). Beale does not explicitly teach the use of anti-cortisol compounds in a composition with anti-HIV drugs.

Lemay et al. teach the cortisol blocker ketaconazole in combination with the anti- HIV drug Zidovudine (AZT).

Devita et al. teach that combinations of anti-HIV drugs are beneficial in treating HIV infection for several reasons: Two or more drugs may have additive or synergistic interactions that produce better efficacy than with either drug alone, lower doses

than those employed in monotherapies- possibly decreasing toxicity, delaying the emergence of a resistant virus that can escape drug inhibition, and targeting of different cellular and tissue reservoirs of the virus; particularly AZT in combination with ddC, ddI or 3TC as the combination of AZT with these agents present stronger synergy over monotherapies or treatment of AZT resistant isolates (DeVita et al., AIDS, 4th edition, pp. 502-504).

The factual inquiries set forth in *Graham* **v**. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

20

25

5

10

15

A prima facie case of obviousness is supported when the prior art alone would have appeared to suggest doing, at the time the invention was made, what the applicant has done. It would have been prima facie obvious to a person of ordinary skill in the art at the time the invention was made that a cortisol blocker could be used in a composition with an anti-HIV drug.

One of skill in the art would have been provided with a clear motivation and a reasonable expectation of success to combine the teachings of Beale with that of Lemay and Devita

5

10

15

20

25

given that any method of treatment would seek to reduce the catabolic effects associated therein, as Lemay and Devita teach the benefits of combination therapies wherein cortisol blockers are used in the treatment of HIV to increase the synergistic effects of an anti-HIV drug and cortisol blockers are shown by Beale to reduce the catabolic effects of the disease itself, whether the catabolic effects are associated with the use of the anti-HIV drug or the disease itself, one of skill would include cortisol blockers in the treatment regime to reduce or alleviate these catabolic effects as an adjunct to a combination therapy.

The prior art need not explicitly state each side effect, only provide a motivation to combine the two compounds, in this case, applicant's side effects would be viewed as catabolic effects, and given that Lemay and Devita teach the benefits of combination therapies wherein cortisol blockers are used in the treatment of HIV to increase the synergistic effects of an anti-HIV drug and cortisol blockers are shown by Beale to reduce the catabolic effects of the disease itself, whether the catabolic effects are associated with the use of the anti-HIV drug or the disease itself, one of skill would include cortisol blockers in the treatment regime to reduce or alleviate these catabolic effects as an adjunct to a combination therapy.

5

10

15

20

This is a continuation of applicant's earlier Application No. 09/234,532. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application.

Accordingly, THIS ACTION IS MADE FINAL even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
